Richmond, January 28th 2013

To: OneM2M Technical Plenary

Subject: Nomination of candidate for the position of OneM2M Working Group 2 (ARC) Vice-Chair

Sierra Wireless is pleased to propose Nicolas DAMOUR as candidate for the position of vice-chair of the Working Group 2 of the OneM2M Technical Plenary dedicated to Architecture.

Nicolas has been actively involved in M2M standardization for several years now in ETSI M2M, as well as in 3GPP. His experience in real-life projects in America, Asia and Europe in the fields of IT, telecommunications and more specifically M2M for Sierra Wireless gives him a sound cross-cultural sensibility and a deep understanding of critical architectural issues for end-to-end M2M solutions as well as an appreciation for the business benefits of standards.

We believe that it is important for OneM2M to benefit not only from the experience of telecom providers and network equipment manufacturers, but also from that of the world's number one M2M module manufacturer with millions of modules deployed worldwide, and hundreds of thousands thereof managed by our M2M cloud platform, covering a variety of M2M applications for customers such as Ford, BMW, EDMI, Ingenico, Schneider Electric or Nespresso.

Sierra Wireless firmly believes in the need for global M2M standards for the market to realize its full potential, and is fully committed to support Nicolas in his task as Working Group Vice-Chair if he is elected.

Sincerely,

Gustav Vos,
Director, Technology Standards
Sierra Wireless
