To: OneM2M Technical Plenary

Subject: Nomination of candidate for a position in oneM2M Working Group 4 (SEC) leadership
           (vice-chairman, or chairman if there are no other candidate)

Gemalto NV (a member of oneM2M Partner ETSI) is pleased to nominate Francois Ennesser as a candidate for the position of vice chairman of the Security Working Group (WG4 SEC) under the OneM2M Technical Plenary.

During his two terms as oneM2M WG4 chair, Francois led the working group toward successful completion of two oneM2M releases, attempting to reflect a realistic vision of M2M security contexts and trade-offs and expanding the scope from addressing M2M service providers requirements towards exposing value added functionalities facilitating M2M applications development in dynamically changing consumer environments.

A new term in the leadership team of the oneM2M SEC WG will enable François to contribute the experience acquired during his 8 years of experience in IoT security standardization and regulatory activities.

Being involved along the whole M2M value chain, from the M2M modules to the service platforms and security solutions at the core and at the edge, Gemalto is fully committed to the success of the oneM2M standards as a way to foster development of the entire M2M ecosystem towards an easily accessible, unified and interoperable Internet of Things.

Sincerely,

Denis PRACA, Standardization Manager
