

To: oneM2M Technical Plenary

Subject: Nomination of oneM2M 2nd new WG (ARC+SEC+PRO (incl. mapping of data models to ARC)) Vice Chairman

On behalf of KETI, I am pleased to propose SeungMyeong Jeong as the candidate for the 2nd new WG (ARC+SEC+PRO (incl. mapping of data models to ARC)) Vice Chairman position.

SeungMyeong has been working actively in ARC and PRO WG as the WG2 Vice Chairman and the Rapporteur of Work Items for Smart Cities, Protocol Bindings. Also as one of the ARC WG main contributors, he provided his technical contributions on smart cities, feature catalogue as well as the functional architecture. In PRO WG, as the delegate of KETI, which is the OCEAN open source founding member, he provided protocol contributions from our oneM2M open source experiences and feedback from our solution adaptors.

Now he is focusing on the IoT-enabled smart cities and edge/fog as the research topics with on-going R&D projects in South Korea. Since those two areas are also the oneM2M Release 4 main targets, I strongly believe that he will try his best to help oneM2M standard evolutions and its adoption with KETI and partner organizations

KETI will provide necessary supports for SeungMyeong if he can get the honor to be elected as the WG Vice Chairman.

Sincerely Yours,

Hyung Su Lee

Vice President

Korea Electronics Technology Institute
