

oneM2M Interop Event  
IoT Networking Innovation and Application Technology Exchange  
Invitation Letter

The Institute for Information Industry (III) has collaborated with the oneM2M IoT standard organization since 2012, promoting its standard in Asia. III also participated in the oneM2M event held by the TTA and ETSI organizations at Nice, France in late 2015.

The Industry and supply chain is rapidly maturing in Taiwan now: the time is ripe to invest more in oneM2M technology and adopt the required new skills for the burgeoning industry, driving future international sales.

III would like to invite companies to join the festivities and learn more about the IoT standard and ongoing technical cooperation, or even participate in further developing the standard. This will bring more oneM2M-related business to our partners.

15th May, oneM2M professionals: come and join the IoT Networking Innovation and Application Technology Exchange hosted by III! Share your oneM2M experiences, skills, and IoT products; expand the IoT business together.

16th – 19th May, III will work together with TTA and ETSI, two of the founding Partners of the oneM2M Interoperability Test Event #4 (INTEROP 4) . This is the 1st time it will be held in Taiwan and the 4th ever event. We hope to improve the product and gain new skills throughout the event. IoT and oneM2M experts are invited to share their experiences.

We are pleased to extend this invitation to all oneM2M professionals!

Best Regards,  
Committee of Communication Industry Development Ministry of Economic Affairs
